**DEPARTMENT OF
POLITICAL SCIENCE & PUBLIC
ADMINISTRATION**

PROGRAMME HANDBOOK

2026

PROGRAM INFORMATION

Program Name and Degree Awarded: Political Science and Public Administration
(Undergraduate Program)

Duration of Studies: 4 years (8 semesters)

Total Credits:121/ ECTS 233

Language of Instruction: English

Mission and Vision:

The mission of Public Administration Department is

- To improve the factual knowledge and practical competences of the students through extensive research on contemporary issues that are constantly emerging both at domestic and global levels.
- To equip students with intellectual depth and with the necessary tools to think independently, develop critical and unbiased understanding and be open-minded about alternative points of view
- To encourage students to take part in collaborative projects and works.
- to prepare well-educated students to pursue their career opportunities in public institutions including various branches of the ministries of the state, academia, media and private sector as well as in non-governmental and multinational corporations.

Vision: The vision of the Department of Public Administration is to become a distinguished academic center that generates innovative knowledge, fosters democratic values, and contributes to effective and ethical governance at national and global levels. It aspires to educate future leaders and professionals who are equipped with critical thinking, research skills, and a strong sense of social responsibility, thereby strengthening the quality of public service and civic life.

Program Objectives:

The Political Science and Public Administration program is designed to provide students with a comprehensive theoretical and methodological foundation in the fields of political science, governance, and public administration. It aims to develop their capacity for critical inquiry, independent research, and advanced analytical reasoning in addressing complex political and administrative phenomena. The program also equips students with the intellectual and practical competencies required to interpret, evaluate, and respond effectively to contemporary challenges in national and international contexts. Furthermore, it fosters an interdisciplinary and collaborative academic environment that enhances problem-solving, decision-making, and leadership skills. Ultimately, the program prepares graduates for professional engagement in public institutions, non-governmental organizations, international agencies, academia, and the private sector, as well as for further scholarly advancement at the postgraduate level.

Program Learning Outcomes

1. Enhance effective decision-making, critical thinking skills and analytic techniques.
2. Demonstrate ability for teamwork, collaboration and leadership.
3. Understand social and legal issues, both within local and global environments.
4. Speak and talk English for professional purposes.
6. Understand and evaluate ethical issues and situations.
7. Know the political and administrative features of various countries.
8. Follow major contemporary events of global relevance.
9. Define the major terms used in Political Science and Public Administration.
10. Evaluate the major norms relevant for Political Science and Public Administration.
11. Understand the different theoretical approaches to Political Science and Public Administration.
12. Understand the different methodological approaches to Political Science and Public Administration.
13. Interpret factual knowledge in the light of specific political theories and methodologies.

Catalog Description	This course will introduce a comparative study about political systems and functioning of structures in them. Formation of modern national government and historical development of political systems in the context of government types will be examined.							
Course Objectives	The course has the following specific objectives: The course is designed to introduce major theoretical institutional frameworks and research paradigms in contemporary political science. The emphasis is placed on different approaches to the task of explaining political institutions and their effects on political and governmental practices in modern representative democracies. Within this framework, this course focuses on key institutions such as nation-state, electoral systems, legislative-executive relations, bureaucracy, courts, territorial dimension, and examines the role of some of major actors such as voters, political parties and interest groups.							
Learning outcomes	<ol style="list-style-type: none"> 1. Describe institutional aspects of political phenomena 2. Explain political institutions and their effects on political and governmental practices 3. Describe and explain political institutions in a systematic way 4. Analyse political institutions through the conceptual framework

Course Objectives	The objective of the course is to give the students an indepth understanding and knowledge of local government, which is the lowest level elected territorial organization within the state. Also the universality of local governments and their role in the multilevel government of the modern state will be assessed. Other topics covered will include the functions, status, structure, and the finance of local governments. Special emphasis will be given to party politics in local government and to their role with the center.							
Learning Outcomes	At the end of this course the student:							
	1. will have a good grasp of the universality and widespread existence of local governments in all states both federal and unitary							
	2. will be able to understand the important role of local governments in multilevel governance of states							
	3. will be better equipped and more knowledgeable in making an in-depth analysis of the functions of local government and its immediate accessibility to its local citizens to resolve their problems							
	4. will be able to gain a better insight into the status, organizational structure and finance of local governments							
	5. will have a comprehensive understanding of the arguments that favour or are against the relative decentralization of local governments

Catalogue Description	This course aims to introduce the participants with the major ideas of Structuralism and Post-Structuralism, whose major representatives are (mainly French) philosophers, sociologists, anthropologists, psychologists and literary critics. While summarizing its major ideas with relevance to these other disciplines, the course intends to show the relevance of (Post-) Structuralism to the fields of Public Administration and International Relations.							
Course Objectives	This Course is not aimed to offer a structural theory about politics. Rather, it will explore how the analysis of structure fits into a general theory of politics. It seeks to organize student understanding about what goes into political system, what constitutes the raw materials which it has to operate and what comes out.							
Learning Outcomes	1. to understand how to look in to the components of political systems and 2. to analyze them through an structural perspective

Catalogue Description	The main objective of the course is to search the history in the making of political thought. In order to do that, the course examines scientificity and tries to explain how theories are formed. It clarifies the relation between theory and practice. Through a historical perspective, the course aims to make the students understand that the modern political thought has roots in history starting from ancient Greece.							
Course Objectives	The course aims to equip students with a deep understanding of the evolution of political thought, emphasizing the development of key theories from ancient Greece to modern times. Students will explore the relationship between political theory and practice, critically analyze the formation of political ideas, and understand their relevance in shaping modern political discourse. Through this historical lens, the course encourages students to engage with foundational texts and concepts, fostering analytical skills in interpreting political philosophies.							
Learning Outcomes	<ol style="list-style-type: none"> 1. to understand how knowledge are formed and the relation between reality and the theory. 2. to grasp the differences and similarities between hard and soft sciences and political theories and IR theories. 3. to understand why and how philosophers created their ideas and thoughts about politics.

Course Catalogue	This course includes topics about political economies to understand its improvement in the globalized world. The topics about economic perspectives will help students to comprehend and analyze the differences between different perspectives.							
Course Objectives	The course provides introduction to the basic background knowledge, which contains the scientific research method and the traditional schools of political economy. In addition, the course introduces important topics of IPE research including international trade system, international monetary system, and multinational corporations (MNCs). The last part of the course addresses contemporary IPE issues such as economic development, economic coercion, foreign aid, and globalization. The students are expected to learn to know how to use IPE theories and analytical frameworks to analyze (describe, explain, and forecast) important developments shaping the contemporary world.							
Learning Outcomes	<ol style="list-style-type: none"> 1. To understand the interactions of nation states, global corporations and international organisations in the global market 2. To understand basic knowledge of the historical change in international economy 3. Compare and contrast the competing idea systems such as liberalism, mercantilism and structuralism 4. To evaluate international political economy in today's world

Catalog Description	The course familiarize the students with the concepts of modern state, authority and rational-legal bureaucracy. The emergence of the welfare state at the second half of the 20th century and subsequent globalization process are discussed in relation to their effects on the transformation of bureaucracy as well.							
Course Objectives	This course explores different notions of the state from the theoretical perspective. It examines in particular how the relationship between the state and civil society is envisaged. Within this framework, it focuses on various accounts of states in terms of modern and contemporary ideologies such as classic liberalism, modern liberalism, classic Marxism, neo-Marxism, post-Marxism, Feminism and Environmentalism.							
Learning Outcomes	<ol style="list-style-type: none"> 1. Describe ideational aspects of the state 2. Describe the nature of the state 3. Discuss the role of the state 4. Analyse political institutions through the conceptual framework 5. Analyse the interactive relationship between political actors and political institutions 6. Identify and analyse the structures and operation of political systems. 7. Analyze and evaluate political problems and processes

Catalog Description	This course includes topics that helps to increase the skills/ability of students about social issues and problems in social sciences. This course also aims to improve the approaches about problems and analyze them in social sciences.								
Course Objectives	The main purpose of this course is to let students see how seemingly diverse disciplines intermingle — anthropology and economics, for example. In the end, students will be able to approach social issues with unbiased problem-solving skills.								
Learning Outcomes	<ol style="list-style-type: none"> 1. Ability to define social science and explain its relevance and importance as an interdisciplinary area of study. 2. Ability to develop reasonable approaches to problems in social science. 3. Ability to systematically analyze social issues. 4. Ability to understand the interdisciplinary nature of social sciences.

Catalogue Description	The two important aims of this course are to introduce students with a relatively detailed account of the history of international relations from the Westphalian world order to the First World War and to investigate main historical turning points and factors which were crucial in the formation of the modern international system. In this sense, the course will focus on the nineteenth century power relations within and among the major European powers which led to the outbreak of World War I. Relatedly, the reasons and results of the World War I will be analysed in this course.													
Course Objectives	The course makes a survey of world history from the Industrial, American and French Revolution to the First World War (1774-1914).													
Learning Outcomes	1- to have an idea about main concepts such as state, international system, international society, hegemonic powers/system etc.; 2- to evaluate the development of the modern international system from a historical perspective; 3- to discuss the political and historical developments of the 19th century; 4- to have knowledge about the reasons and consequences of the World War One.

Catalog Description	In this course, we will focus on the different human resource practices from the perspective of strategic human resource management. The main point is competency. Based on competency model, the course will analyse the human resource management environment, recruitment and selection, training and career development, motivation and compensation, performance appraisal systems and performance development, and international human resource management. During the teaching, cases will be used and shared, and hot issues such as "human resource management and culture" will be discussed.							
Course Objectives	The objective of the course is to introduce and outline the core issues of human resource management and core models and theories of human resource management, and to create awareness about the human resource management principles and methodology. By studying and applying knowledge and tools in the human resource management area, students should develop capabilities towards human resource management program design and human resource development.							
Learning Outcomes	(1) get knowledge of human resource management framework; (2) outline the core areas of human resource management; (3) grasp the core models of human resource management; (4) create awareness about the human resource management principles and methodology ; (5) have more interests in human resource management.

Catalog Description	This course introduces students to the fundamental principles, techniques, and methodologies used in conducting research in the social sciences and beyond. Emphasis is placed on developing skills in research design, data collection, analysis, and interpretation. Students will explore both qualitative and quantitative research methods, with practical experience in formulating research questions, designing surveys and experiments, conducting literature reviews, and using statistical tools for data analysis. Through a combination of lectures, case studies, and hands-on projects, students will gain a thorough understanding of the research process and be prepared to apply these skills to real-world research problems. Ethical considerations in research and issues related to data reliability and validity will also be discussed.							
Course Objectives	This course will contribute to students developing the knowledge and skills in research. Students will comprehend the foundations of research, improve producing research topic, question and hypothesis, learn to make search for literature review, improve skills to design/plan research and data collection techniques and analyse collected data. This course will also help students think critically and apply problem-solving techniques about research.							
Learning Outcomes	Students are expected; 1. To understand the nature of scientific research. 2. To apply the steps of a scientific research. 3. To create research problem and identifying/creating hypothesis. 4. To understand the basic quantitative and qualitative research methods. 5. To prepare and present project report.

Catalogue Description	The course deals with the basics of law. It introduces the students the elements drawn from legal theory, legal philosophy as well as legal practice. It makes special references to Turkish law. It starts with the discussion of what law is and continues with the other rules of social conduct like moral and customary rules. It familiarizes students with legal concepts like "burden of proof" and methods of legal interpretation.								
Objectives	To teach basic principles of law and basic concepts of legal terminology. Also, to introduce sources of law, legal rules and their applications.								
Learning Outcomes	Students are expected to; 1. To achieve a basic understanding about law; 2. To be familiar with the basic principles of law and basic concepts of legal terminology; 3. To learn sources of law/Turkish law; 4. To be familiar with legal rules and their applications; 5. To learn the branches of law.

Course Objectives	The aim of this course is to define ethical principles, to enable students to develop ethical behaviors related to their profession, and to provide information about unethical behaviors that students may encounter in their professions. Within the context of the course, students will demonstrate understanding of the ethical principles in general or in application of specialized knowledge, results of research, creative expression, design processes, etc.that are related with their sciences, disciplines and potential professionals.							
Learning Outcomes	LO1:	Demonstrate knowledge of important ethical systems and ethical types						
	LO2:	Demonstrate their respect for different ethical perspectives						
	LO3:	Critique some aspects of an ethical and unethical behavior						
	LO4:	Clearly formulate their ethical position on an issue

Catalog Description	This course introduces students to the economic role of government in a modern economy, with a focus on efficiency, equity, and public welfare. It examines the theory and practice of public expenditure, taxation, public goods, and externalities, and market failure. The course also explores government budgeting, fiscal policy, social welfare programs, and public debt, along with issues of income distribution and poverty. Through theoretical analysis and real-world applications, students develop the ability to evaluate public policies and understand the economic rationale behind government intervention in the economy. The course provides a foundation for a foundation for advanced study and careers in public policy, public finance, and economic analysis.							
Course Objectives	The objective of this course is to provide students with a comprehensive understanding of the economic functions of government and the principles of public economics. By the end of the course, students will be able to explain the theoretical foundations of public expenditure, taxation, and fiscal policy; analyze market failures such as public goods and externalities; and evaluate government interventions aimed at improving efficiency, equity, and social welfare. The course also aims to develop students' analytical and critical thinking skills through the application of economic reasoning to real-world public policy issues, including income distribution, social welfare programs, and public debt thereby preparing students for further study and careers in public policy and economic analysis.							
Learning Outcomes	Students are expected; 1. To explain the core concepts and theoretical foundations of public economics, including the role of government in the economy. 2. To analyze market failures such as public goods, externalities, and imperfect information, and justify government intervention. 3. To evaluate the principles and impacts of public expenditure, taxation, and fiscal policy on economic efficiency and equity. 4. To apply economic reasoning and analytical tools to assess real-world public policy issues and government programs. 5. To assess the effects of public economic policies on income distribution, social welfare, and economic development.

Catalogue Description	The objective of this course is to give the students an in-depth understanding and knowledge of the following topics: a survey of the world history from the causes of the First World War to the present (1890-2015); the quest for great-power hegemony; the First and Second World Wars; the Bolshevik Revolution and the rise and fall of Communism and fascist powers; the Cold War; the third world and global inequality; power in international politics and the search for national security in the post-cold war era; proliferation of nuclear and bio-chemical weapons of mass destruction, international terrorism and the deterioration of the ecological system.								
Course Objectives	This course provides an analysis of important historical events from 20th century to 21st century. The first part of the course includes comprehensive understanding about the First and Second World War. Following the world wars, the events and competition between superpowers (the USA and the USSR) will be comprehensively assessed to understand the developments during the Cold War period.								
Learning Outcomes	The students are expected 1- To understand the reasons and results of the world wars. 2. To understand the basis of Cold War 3. To understand how the Cold War spread. 4. To understand how the Cold War divided the World.

Catalogue Description	There has been a depressingly large number of violent conflicts with a large number of casualties all over the world. This course discusses why the international community has so far failed to reign in bloody conflicts.							
Course Objectives	Although the use of force is forbidden by international law, international conflicts are common in international relations due to political, economic, security or other reasons. In this course, after understanding the meaning of an international dispute, different types of disputes in the world will be discussed. Finally, it will be focused on different techniques which are available for settling international disputes.							
Learning Outcomes	The students are expected to; 1. To understand the concept of international dispute settlement; 2. To learn the main reasons of international disputes; 3. To compare main international disputes in the world and to discuss the reasons of them; 4. To learn different techniques which are available for settling international disputes.

Catalogue Description	The horrors of the WW I established a solid understanding that International Relations got to be founded as a separate discipline to study International Relations. This course will examine that since then International Relations theories have begun to compete, contrast and complete each other in explaining and understanding the IR.							
Course Objectives	This course provides an analysis of important theoretical debates in international relations. After making a short review on realist and liberal theories the discussions will cover Constructivism, English School and Marxism-Neomarxism. The course also addresses the level of analysis problem, as well as the central assumptions and key concepts of theories of international relations, with special emphasis on the basic concepts, propositions, and current critique of Realism-Neorealism.							
Learning Outcomes	The students are expected 1- To understand the basics of English School 2. To understand basics of constructivist theory 3. To understand basics of Marxist theories. 4. To understand the main differences of the theories above with realist/neorealist and liberal/neoliberal theories.

Catalogue Description
The theory and practice of international organizations (IOs) is a dynamic and increasingly important dimension of world politics. The purpose of this course is to explore both the theory and the practice of international organizations, to examine their evolution over time and their adaptation to changing circumstances at the global level. In this framework, this course will cover two formal inter-governmental organizations, the League of Nations and the United Nations (UN) as well as a treaty organisation, the NATO, by focusing on their historical origins, organizational structures and decision-making processes.

Course Objectives
This course explores the theory and practice of international organizations (IOs), focusing on their historical evolution, organizational structures, and decision-making processes. Students will focus on the reasons of the growing global governance since the end of the World War II, the United Nations (UN), and NATO to understand their roles in global politics and their adaptation to changing circumstances. The course aims to develop students' analytical skills and foster informed discussions on the effectiveness and challenges of IOs.

Learning Outcomes
1. To be familiar with the evolution of IOs and their functioning in international system
2. To have a comprehensive understanding of the roles and activities of IOs
3. To discuss a wide range of substantive issues in IOs
4. To identify the most important problems within and among various IOs and suggest solutions for their better performance

Catalogue Description	This course is designed to evaluate how the experiment of 1951 in the coal and steel sectors among six European nations has grown to be a formal political and economic union among 27 countries. Within this framework, this course covers the short history of the integration process among the European countries along with the political institutions, political system and the key policies of the European Union.							
Course Objectives	The course aims to provide an introduction to the analytical parameters which shape the processes of European integration, to familiarise students with key events and major treaty developments within the EU, to provide analytical tools and guidelines on how to judge the future of the European project and to analyse internal EU policies and their impacts on European and non-European societies							
Learning Outcomes	1	to demonstrate a thorough understanding of the European Union, its institutional processes and policies						
	2	to understand and compare different theoretical approaches to European integration						
	3	to demonstrate an understanding of the main political processes of the EU						
	4	to assess the present and future processes of European Integration in light of the main theories, models and concepts used in the EU studies						
	5	to demonstrate a critical understanding of the EU's key policies and their impact on the outside world

Catalog Description	The course is designed in two stages. In the first stage, it tries to show why we are studying the history of political thought. From a knowledge theory perspective, it explains to the students how the knowledge constructed and came forward in the political thoughts of philosophers. In the second part of the course, in order to illustrate the formation of the political thought, students choose their political concepts and present two of the most related philosophers on those concepts.					
Course Objectives	Main objective of the course is to search the history in the making of political thought. In order to do that the course studies scientificity and tries to explain how theories are formed and clarify the relation between theory and the practice. Through a historical perspective The course aims to introduce the students that modern political thought has roots in history. by studying some philosophers the course aimed to show this connection.					
Learning Outcomes	Students expected to understand how knowledge are formed and the relation between reality and the theory. Through out the course students also expected to grasp the differences and similarities between hard and soft sciences and political theories and IR theories. By studying the historical evolution of political thought students expected to understand why and how philosophers created their ideas and thoughts about politics.

Course Catalogue	This course provides a foundational and comprehensive introduction to the study of political science and international relations. It familiarizes students with the core concepts, theories, and institutions that shape political life at both domestic and global levels. Designed for first-year undergraduate students, the course examines politics at both the domestic and international levels, focusing on how power is structured, exercised, and contested within societies and across the global system. Students will explore how power is organized and exercised, how states and non-state actors interact, and how political decisions affect societies and the international system. The course aims to develop critical thinking, analytical reading, and academic writing skills essential for further study in political science and related disciplines.							
Course Objectives	The objective of this course is to provide students with a comprehensive and systematic introduction to the fundamental concepts, theories, and institutions of political science and international relations. The course aims to familiarize students with the nature of political inquiry, the organization and the exercise of power within states, and the dynamics of interaction among states and non-states actors in the international system. It seeks to develop students' understanding of major political ideologies, political systems, and international relations theories, while encouraging critical engagement with contemporary political and global issues. In addition, the course aims to equip students with essential academic skills, including critical reading, analytical thinking, structured argumentation, and introductory research and writing competencies, and introductory research and writing competencies, thereby preparing students for advanced study in political science, international relations, and related disciplines.							
Learning Outcomes	The students are able; 1. To explain the fundamental concepts, terminology, and subfields of political science and international relations. 2. To identify and compare major political ideologies, political systems, and forms of government. 3. To describe and apply basic international relations theories to contemporary global issues and case studies. 4. To analyze political institutions, actors, and processes at domestic and international levels using introductory analytical frameworks. 5. To demonstrate essential academic skills, including critical reading, structured writing, and the use of appropriate scholarly sources.

Catalog Descriptions	political philosophers who have also made an important contribution to the philosophy of law. This course will focus upon two classical thinkers, i.e. Marcus Tullius Cicero (106 BC - 43 BC) and Thomas Hobbes (1588-1671). Even though they lived and wrote a long time ago, their work remains of relevance because their work addressed both political and legal issues, thereby contributing to the discussion on competing approaches to philosophy of law.															
Course Objectives	Students will be able to learn the definitoin of the Law and Politics, relationships between Law and Politics, historical process, approaches to law and politics and the problem of Baundaries of the Law and Politics															
Learning Outcomes	The students are expected to 1) understand the difference and relations between law and politics; 2) The Rule of Law an Courts in Democratizing Regimes 3) Law and Politics: the Problem of Boundaries 4) Law and Political Ideologies

Catalog Description	This course examines the principles, processes, and institutions involved in the formulation and implementation of environmental policy. It explores the role of governments, international organizations, civil society, and the private sector in addressing contemporary environmental challenges such as climate change, biodiversity loss, pollution, and sustainable resource management. Emphasis is placed on policy analysis, regulatory frameworks, environmental governance, and administrative tools used in planning, enforcement, and evaluation. Through case studies and practical applications, students develop an understanding of how environmental policies are designed, administered, and assessed at local, national, and global levels. The course equips students with analytical and administrative skills essential for careers in environmental management, public administration, and policy-making.							
Course Objectives	The objective of this course is to equip students with a comprehensive understanding of the concepts, theories, and practices of environmental policy and administration. By the end of the course, students will be able to analyze the processes of environmental policy formulation, implementation, and evaluation; examine the roles of government institutions, international organizations, non-governmental actors, and the private sector in environmental governance; and assess the effectiveness of environmental laws, regulatory frameworks, and policy instruments. The course also aims to develop students' analytical, critical thinking, and problem-solving skills through the application of policy analysis tools to real-world environmental issues, while fostering an appreciation of the ethical, social, and economic dimensions of environmental decision-making and sustainable development.							
Learning Outcomes	Students are expected; 1. To demonstrate an understanding of key concepts, theories, and frameworks in environmental policy and administration. 2. To analyze the processes of environmental policy formulation, implementation, and evaluation at different levels of governance. 3. To evaluate environmental laws, regulatory instruments, and institutional arrangements addressing contemporary environmental issues.. 4. To apply policy analysis and administrative tools to assess real-world environmental case studies. 5. To critically assess the social, economic, and ethical dimensions of environmental policy decisions in the context of sustainable development.

Course Objectives	This is a research project that provides students with the opportunity to undertake independent research with the guidance of a supervisor. It is expected that all students will read and cite extensively the academic literature in their chosen area of research. The students should be able to identify problems and use the appropriate methodology to find facts and analyze the data. In preparing a detailed research project for grading, students should write coherent, informative and persuasive papers in conformity with the thesis writing rules as set out in the "Directive for the Preparation of Thesis" of the University.							
Learning Outcomes	On successful completion of this course, all students will have developed knowledge and understanding of; (1) the range of research topics, research methods and sources available in selected topics. (2) reading research methodologies and IR theories. (3) to conceptualize the processes and skills to the development of their own projects. (4) following up ethical issues during research phases

Catalog Description	In this course, an analysis of theoretical and practical knowledge is made. In this context, basic social and psychological factors associated with the concept of leadership and current theories will be explained and how theoretical knowledge can be applied in terms of leadership and management functions in organizations will be emphasized. The aim of the course is to provide students with a deep understanding of leadership and management concepts and to develop their own leadership skills.								
Course Objectives	To provide students with a variety of learning experiences related to the theory and practice of leadership. To enable students to develop a personal leadership profile. To analyze both traditional leadership models and current leadership research findings. To examine the importance of motivation, value development, and change management in organizations.								
Learning Outcomes	1. Describe the concept of leadership and effective leadership theories 2. Distinguish between managerial processes, traits & skills 3. Recall diversity and the challenges of workforce environments 4. Identify the effective use of power & influence in organizations 5. Recognize leading change in organizations

Course Objectives	This course introduces the main grammatical structures to the students and helps them to develop their listening, speaking, reading and writing skills as well as vocabulary and pronunciation. The students are provided with clear rules and example sentences. The lessons contain high frequency vocabulary that the students are likely to come across during their studies and future their future careers								
Learning Outcomes	1.The students will be able to understand and use English structures accurately to express themselves. 2. The students will be able to learn and use the vocabulary learnt during the lessons in real life contexts.

Course Objectives	This course introduces the main grammatical structures to the students and helps them to develop their listening, speaking, reading and writing skills as well as vocabulary and pronunciation. The students are provided with clear rules and example sentences. The lessons contain high frequency vocabulary that the students are likely to come across during their studies and future their future careers								
Learning Outcomes	1.The students will be able to understand and use English structures accurately to express themselves. 2. The students will be able to learn and use the vocabulary learnt during the lessons in real life contexts.								
Textbooks and/or References	1	English File, Intermediate Plus, Student's Book, Christina Latham- Koenig, et al, Oxford University Press, Third Edition							
	2	English File, Pre-Intermediate Plus, Workbook, Christina Latham- Koenig, et al, Oxford University Press, Third Edition							
WEEK	Date	TOPICS					Reference no to learning outcomes
